APPLICATIONS

SMALL FOUNDRY, BLADES, OTHER ENGINE PARTS, OTHER STRUCTURE PARTS

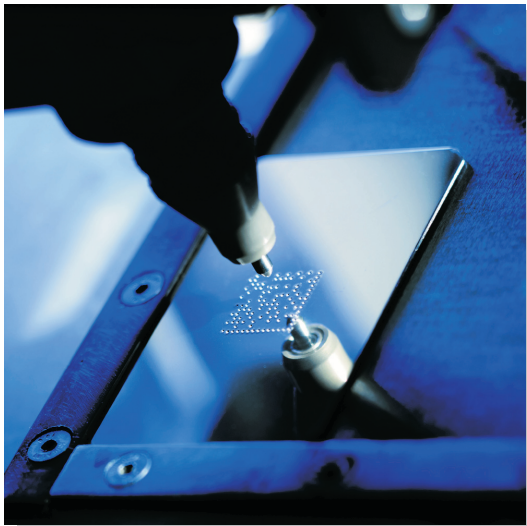

MARKING MACHINES

Inside of our microdots marking systems all of our marking machines models can mark the DATA MATRIX code, which it is a type of code, identification and traceability in two dimensions (2D), which, it is used a lot in the Aeronautical sector.

Find attached herewith one picture where it can see the appearance of a marking in this type of code and two more corresponding to two of our marking machines. In one of them the machine is portable and in the other one the marking head is ready to be integrated in any automated production line. Both models can mark the code previous mentioned and have a marking surface of 50x17mm. Obviously, there are models with larger marking surfaces in function of the requirements of each case.
